Appln. No. 10/524,019 Amd. dated May 25, 2007 Reply to Office Action of December 27, 2006

## Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:
Listing of Claims:

- 1. (Currently Amended) A method for stabilizing a recombinant protein solution formulation, which comprises storing the protein solution formulation under magnetic field lines.
- 2. (Original) The method according to claim 1, wherein the magnetic flux density is 1 mT (millitesla) or more.
- 3. (Currently Amended) The method according to claim 1 or 2, wherein the <u>recombinant</u> protein is a physiologically active protein.
- 4. (Original) The method according to claim 3, wherein the physiologically active protein is selected from an antibody, an enzyme, a cytokine and a hormone.
- 5. (Original) The method according to claim 4, wherein the physiologically active protein is a hematopoietic factor.

6. (Withdrawn) The method according to claim 5, wherein the hematopoietic factor is erythropoietin or granulocyte colony-stimulating factor.

## Claim 7. (Cancelled)

8. (Currently Amended) The method according to claim 1, wherein the <u>recombinant</u> protein solution formulation is in the form of a pre-filled syringe formulation.

## Claims 9-10. (Cancelled)

- 11. (Currently Amended) A method for stabilizing a recombinant protein-containing solution, which comprises storing the protein-containing solution under magnetic field lines.
- 12. (Currently Amended) The method according to claim 11, wherein the <a href="recombinant">recombinant</a> protein-containing solution is a bulk solution for protein production.

## Claims 13-18. (Cancelled)

- 19. (New) The method of claim 1, wherein the recombinant protein is an isolated and purified recombinant protein.
- 20. (New) A method for stabilizing a composition consisting essentially of a protein and a pharmaceutically

Appln. No. 10/524,019 Amd. dated May 25, 2007 Reply to Office Action of December 27, 2006

acceptable carrier comprising storing the composition under magnetic field lines.

- 21. (New) The method according to claim 20 wherein the protein is selected from the group consisting of antibodies, enzymes, cytokines, and hormones.
- 22. (New) The method according to claim 20 wherein the protein is a hematopoietic factor.
- 23. (New) The method according to claim 22 wherein the hematopoietic factor is erythropoietin or granulocyte colony-stimulating factor.
- 24. (New) The method according to claims 20 wherein the pharmaceutically acceptable carrier is water.
